

Every journey is a series of choices. The first is to begin the journey.

Patience has its own rewards.

Taking the first step can be harder than the rest of the challenge.

Many small obstacles can make for one large problem.

Some choices learn us something, even if we never could get anything.

Live on your own watch, not on someone else's.

Failing to succeed isn't the same as failing to progress.

Some paths are clearer than others.

Some paths are straight forward.

A choice may be as simple as going left or going right.

The choice doesn't matter if the outcome is the same.

If you don't like where you're making a choice, try doing something else.

When you return to where you have a choice, it may be different.

We fall down when we're making a choice, it's to great rewards.

Building a bridge can get you over a problem.

Some hurdles are too high to jump over.

Life is full of ups and downs.

Connecting the pieces can solve a puzzle.

Life has a way of pushing us in the right direction.

The end may be more than just a goal.

Life isn't about getting to the end.

It's harder to progress if you're leaving things behind.

The further we get, the less help we need.

Moving forward to complete making the most of what you've got.

Some tasks require a lot of care and deliberation.

Taking one path often makes everything else an afterthought.

A path may not be right or wrong, it may just be different.

Look a little harder, and you will get a very reward.

Venturing into the unknown can lead to great rewards.

If you're only focusing on right now, you won't have enough for later.

A goal and will only stay if you don't try to move through it.

Taking a certain way may require building your own path.

There's nothing wrong with taking their truth.

We often fall into things when we least expect it.

What looks out of reach may only be a few steps away.

There are multiple ways to approach a situation.

When you've hit rock bottom, the only way is up.

Some outcomes are more favorable than others.

How we perceive a problem can change every time we see it.

The solution to a problem may just require a more thorough look at it.

Anything through a problem even a small one may give the right solution.

Moving through a problem even a small one may give the right solution.

If you never stop trying, you will get there eventually.

How persistence may be the only option more than giving up entirely.

Some problems just come down to size.

A problem may be difficult when you are missing the right tools.

What we do on the surface may impact what we can do on the inside.

If you're not paying attention, you will miss everything around you.

Some choices can seem like coming around in circles.

Solving a problem may only help you find the answer.

What appears impossible may have a very simple answer.

If you're in sight of where you want to be, it may not be there when you need it.

Too much curiosity can get the best of us.

Signs may be helping you more than you realize.

Obstacles may be helping you more than you realize.

Small steps can take you great distances.

The path of least resistance is a wild option.

No matter how high you climb, there's always more to achieve.

Falling down doesn't always lead to get up and try again.

The world is only changed when we wish to see it happen.

Half way through is half way finished.

The problem may not be where you're going, but how to get there.

New skills enable further progress.

Mastering a skill requires practice.

A little blind devotion can get obstacles out of your way.

Solving a problem may require approaching it from a different angle.

Trying harder and you will get to where you want to be.

Some doors are closed until we have them open.

When problems are overwhelming, sometimes the best thing to do is to wait.

By a little down we may find something new.

Attention to detail can lead to very rewarding outcomes.

Solving a problem may require using abilities that we didn't realize we had.

Old skills are useful even after we have learned new ones.

The right answers may often be the most obvious ones.

Some obstacles are more obvious than others.

Some things don't have a deeper meaning.

The clock outside of the right time will get you where you want to go.

Some choices are only useful when we make them early.

With forethought, things have a way of just working themselves out.

Some challenges are far harder than they first appear.

To get past a problem, you may just need to keep pushing through it.

Getting to a solution requires cutting out what's not working.

The further we explore, the more content everything becomes.

A solution of opportunity can be in plain sight if you are willing to be a little naive.

The world is never different on the other side.

When you have enough resources, you can start growing more.

You can grow a garden anywhere.

The last solution may still be the most obvious one.

If you lead the way, others will follow.

Straightforward problems can often require creative solutions.

If you are missing the resources, it may be difficult to be initiated.

When you look beyond the resources, you may be able to move to find.

Sometimes we only have just enough to get by.

When what you have is not enough, find ways to be more than enough.

Getting where we want may come through some things.

The way you find things is just to be a new bright.

Similar problems can have entirely different solutions.

Some events happen when we want them to.

Old solutions can apply to new problems.

The consequences of a choice can be off from making others.

At times we need to view the world from someone else's perspective.

Sometimes you need to be carried.

There comes a time when you need to be carried.

With more experience, previous challenges aren't as difficult.

There's no need to take apart what already works.

A few steps, sometimes you need to move forward.

Obvious problems may require less unusual solutions.

Getting to the end requires seeing off the last child.

The world is always there to surprise us.

Sometimes we do things just to be along for the ride.

The more we complete, the easier it gets to find what we missed.

Some challenges can be more than we know.

You can't do everything yourself.

The world is full of secrets waiting to be uncovered.

Looking behind the scenes can be more than we know.

Some problems can't be solved until we're more experienced.

We move on when there is nothing left to learn.

Complicated problems are often what we need to solve at a time.

We can appreciate the entire journey as well as the end.

Every journey comes to an end.
